

PURAFISH

NATURAL LIQUID FERTILISER

Reg. No. 3456M

Purafish, being totally derived from organic sources, contains amino acids and minerals in natural form that are much more readily available to plants. The nitrogen is in the form of peptides and amino acids, which slowly break down when added to soils, thereby reducing leaching losses and increasing nitrogen availability to plants over a longer period of time.

Purafish is used as a liquid fertilizer to improve soil fertility and plant growth and has been used for centuries throughout the world. Omnia Specialities Australia's Purafish is a natural balanced liquid fish fertilizer that has been manufactured using a low temperature, natural enzyme process to preserve the nutritional value of the protein and essential nutrients.

Benefits of Purafish include:

- Increased microbial and earth worm activity
- Improved efficiency of other fertilizers
- Natural chelating properties
- Provides natural nutrients immediately available to the plant

Purafish can be applied through spray or dripper systems or as foliar spray. It should be diluted with water before spraying onto foliage.

Application Rate:

Foliar: For most crops 5-8L/ha in a minimum of 400L of water. Do not store diluted or mixed product.

Soil: 5-20L/ha applied 1-3 times annually

When mixing with other liquid fertilizers, test for compatibility with a small quantity in a jar.

Availability:

20L, 200L, 1000L containers.

Typical Analysis

%W/V

Nitrogen	2.50
Phosphorus	1.25
Total Solids	23.00
Amino Acids
