# A superior calcium formulation to increase resilience

FoliCal 19, is a high analysis, flowable and rapidly available source of calcium. Calcium is arguably the most important single micronutrient in high production agriculture. Calcium is used to strengthen cell walls and membranes, essential for fruit quality and longer shelf life. Ensuring that the dividing cells receive all the calcium they require is a real challenge.

FoliCal19 contains a natural chelating agent to assist the plants uptake of Ca. Regular foliar application of FoliCal 19 will alleviate Ca deficiencies due to limited root uptake and slow movement of Ca in mature plant parts.

## Benefits of FoliCal 19 includes:

- Specific pH for improved uptake
- Contains high quality fulvic acid for enhanced uptake
- Corrects calcium deficiencies
- Strengthens cell walls

## Application:

FoliCal 19 can be applied as a foliar spray, or through fertigation systems.

Refer to the label for application rates for specific crops

## Availability:

FoliCal 19 is available in 20 litres, 200 litres and 1000 litres
